

1   **ABSTRACT OF THE DISCLOSURE**

2           A three dimensional image presenting device includes a three dimensional  
3   image presenting plate, multiple three dimensional image presenting units defined in the  
4   three dimensional image presenting plate, wherein each three dimensional image  
5   presenting unit is a space defined in the three dimensional image presenting plate and  
6   has a convex end, and multiple optical fibers each having a distal end corresponding to  
7   one of the three dimensional image presenting units. An image displayed by the three  
8   dimensional image presenting plate is apparently three dimensional due to the convex  
9   end of the space.
